Location-based Bathroom Reviews

Team Members: Zach Holbrook, Tarum Fraz, Devin siems, Elisabeth "Beth" Oliver, Brooke Dalton

Document Name: Sprint 1 Report

Sprint 1 Completion Date: 2/4/2018

Revision Number: 1.1

Revision Date: -

Actions to Stop Doing

Not communicating as often - Communication this sprint has been spotty. We talk after class, giving a brief overview of what we have been doing, but until the very last day we didn't get together to talk about the details of what we are building. We would like to improve in this area.

Leaving tasks up in the air - We had a very vague plan going in. We had an even vaguer idea who was going to do what. This led to little work getting done during the sprint, until our big meet up at the end.

Actions to Start Doing

Using the scrum board more - Again related to our vague tasks and our lack of communication. We believe that making greater use of the scrum board will help us better organize ourselves even when not working together in person. It should help us determine what needs to be done and who is working on what so we don't step on each other's toes as much.

Working as a team - There was a lot of Zach just working by himself this sprint. We as a whole don't mind, but none of us want Zach to completely and solely carry the group.

Get better with Git (push more, figure out the command line better) - A couple members aren't particularly familiar with git, so have not been committing as much or as easily as they could be.

Actions to Keep Doing

Group meetings - The most work that we did this sprint was in group meetings. It was very helpful to work together in person. We should strive to have more of these in the coming sprints.

Work Complete

- Specified API

- Developed Models for Database

- Written server which responds to GETs DELETEs and PUTs

- Server responds in JSON format

- Ahead:

- Started Front End

Work completion rate

Four user stories were completed this sprint, resulting in around 40 hours of work. We had estimated 35.5. This difference is more to do with us working on other tasks beyond what we specified for the sprint, than as a result of us underestimating the time tasks would take. With 14 days in the sprint, this implies about 3 hours per day.
